

Duffer – Final Product Requirements Document (PRD)

1. Product Overview

Duffer is an anonymous social platform where users share short text posts in a single global feed and interact using emoji reactions. The platform emphasizes content over identity. Users remain anonymous to each other while competing to create engaging posts that generate reactions.

The initial version focuses on simplicity, authenticity, and engagement rather than complex social features.

2. Product Vision

Create a platform where people can freely express thoughts and interact with ideas without the pressure of personal identity or follower counts. Duffer aims to become a place where anyone can post instantly, conversations feel natural and unfiltered, and ideas spread through engagement rather than popularity.

3. Product Philosophy

Content wins, not popularity.

Duffer is designed as a competitive anonymous social network where users compete through: - funny posts - clever thoughts - viral reactions

The platform removes followers and popularity systems so discovery is driven by engagement.

4. Target Users

Primary users: - College students - Gen■Z internet users - People who enjoy spontaneous online conversations - Users who prefer anonymous expression

5. Identity and Authentication

Users sign in using Google Sign-In.

After login, the system generates a persistent anonymous username. Example: rahul@gmail.com
→ Anon_4821

Rules: - Real identity is never shown publicly - Email remains private - Anonymous username is visible - Username persists across sessions

6. Social Structure

Duffer intentionally does not include followers or following systems.

Users cannot follow other users. All posts compete in the same feed. Ideas spread through reactions rather than follower networks.

7. Core MVP Features

- Google authentication - Persistent anonymous usernames - Post creation - Global feed - Emoji reactions - Admin moderation tools

8. Post Creation

Users can create short text posts.

Rules: - Text only - Maximum 200 characters

Posting flow: Write post → Press POST → Post appears in feed.

9. Global Feed

Duffer uses a single universal feed visible to all users.

Feed characteristics: - Newest posts appear first - Continuous vertical scrolling - No algorithmic ranking in MVP

10. Reaction System

Users react using an emoji picker similar to messaging apps.

Reaction flow: User taps react → Emoji picker opens → User selects emoji → Reaction appears on post.

Rules: - Any emoji can be used - Reaction counts are visible - Multiple users can react to the same post

11. Platform Culture

Duffer encourages authentic communication common in student and Gen■Z communities.

Casual slang and mild profanity may appear in posts such as: wtf, bro, damn, unc, clap

The goal is natural and honest conversation.

12. Content Restrictions

The platform does not allow: - Threats of violence - Encouragement of self■harm - Illegal activity - Extreme harassment

Posts violating these rules may be removed and users may be banned.

13. Moderation System

During MVP moderation is simple and manual.

Admin (the creator of Duffer) can: - Remove posts - Ban abusive users

14. Features Excluded From MVP

- Followers - User profiles - Private messaging - Comments - Media posts - Trending feeds - Algorithmic ranking - Top Post of the Day (TPD)

15. Future Feature – Top Post of the Day (TPD)

TPD highlights the post with the highest number of reactions in a single day.

Example: Top Post Today – Anon_4821 Post receives highest total reactions.

The leaderboard resets every 24 hours.

16. Future Moderation Enhancements

Possible future systems: - Report post feature - Automated threat detection - Strong language labels

17. Success Metrics

- Daily active users - Posts per day - Reactions per post - Average session duration

18. MVP Objective

Validate whether users: 1. Post anonymous thoughts regularly 2. Interact using emoji reactions 3. Engage with a single global feed

19. Product Positioning

Duffer is a competitive anonymous social network where content wins, not popularity.

Core pillars: - Anonymous identity - Reaction-driven engagement - Fair content discovery - Spontaneous conversations
